

Academy Snapshot

Sharing what Ten10 Junior Consultants are working on

Hello! I'm Emma, and I joined Ten10 in January as part of Academy 33. Following core training, I did the dev academy and have been placed at Advania since May. Advania are a Microsoft partner, specialising in Azure, Security, Dynamics 365 and Microsoft 365. Along with three other Ti10s, I joined Advania as a consultant within their professional services. We started as part of Advania's early careers cohort and are in their Manchester office three days a week.

Emma Loble | Academy 33

Initially, I started within their Azure team but have since reoriented towards a data analyst role. My main responsibilities involve working with Power BI to transform, model and analyse data from various clients. I've created a range of reports and dashboards on diverse data sets, from waste management to sales figures to debt ledgers. Engaging with different clients about their data modelling and reporting requirements has significantly boosted my confidence and broadened my understanding of the professional world.

In addition to working with Power BI, I have gained exposure to other areas of the Power Platform. Currently, I am involved in a client project that includes building Power Apps and Power Automate Flows. This project also requires us to have daily stand-ups with the client and use Azure DevOps boards to manage our user stories for the apps we are creating.

Overall, my journey at Advania has been incredibly enriching, and I look forward to continuing to grow and contribute to exciting projects.
