

Academy Snapshot

Sharing what Ten10 Junior Consultants are working on

Hello, my name is Ivan Mogilenko, and I joined Ten10 in September 2023. Coming from a non-technical background, I initially found much of what I encountered to be completely new - an exciting challenge! After completing the academy training, I was placed with BAE Systems in March 2024 as a Test Automation Analyst, a role I thoroughly enjoy!

Until this year, I worked with the Ten10 Automation Factory, building automation suites and scripts. In 2025, I am gradually transitioning to a client-side role, where I focus on updating, executing, and maintaining previously developed tests.

Working with various tools and technologies requires continuous learning, so I spend some time reading documentation and conducting research. Beyond my daily work, I actively pursue technical growth. I have earned my Azure Developer Certification and ISTQB Foundation Certification and I am currently preparing for the ISTQB Automation Test Engineer Certification.

My role is fully remote, but I maintain regular catch-ups with both the client and Ten10. This is a highly technical position involving extensive coding and automated test creation.

On a daily basis, I work with JIRA, Bitbucket, Jenkins, Visual Studio Code, and Git, among others. For automation, we use C#, leveraging Playwright and FlaUI, depending on the application type.

Since I joined, Automated Regression Testing has been a major focus, and its adoption has significantly improved testing efficiency. What once took a considerable amount of time can now be completed in just a few hours. Test results are seamlessly integrated into JIRA, presented in a clear, human-readable format, enriched with graphs and other useful insights. This streamlined approach has enhanced the overall testing workflow, making it more efficient and accessible.
