Sharing what Ten10 Junior Consultants are working on

I joined Ten10 in January 2024 and have spent the past nine months as a Technical Analyst at The Charities Aid Foundation (CAF) within their Technology department. My role involves analysing CAF new and legacy systems, gathering requirements from various business teams, and producing detailed technical documentation to support the software delivery teams working on CAF's digital giving and non-profit banking platform.

A highlight of my role was delivering an API project for Open Banking services, enabling third-party integrations that allow customers to access their banking information alongside accounts from other financial institutions.

This project also ensured CAF's compliance with the Payment Services Directive 2 (PSD2), which came into effect in November 2024, making it a fast paced project given the short time frame from project kick-off. Currently, I'm focused on some smaller analyst work such as RBCA and decommissioning requirements, while other CAF projects are temporarily on hold due to a large core banking system replacement goes live.

The additional BA training I received helped me feel prepared and confident when starting this role, particularly the stakeholder and expectation management skills gained from the practical training. In addition to eliciting functional and non-functional requirements, my day-to-day activities can vary: from running technical requirement workshops to identify tasks and their estimations, producing process flow diagrams, wireframes, and service support packs to aid project delivery and decisions.

Relocating to a flat within walking distance of the CAF office has been incredibly beneficial for my development in the role. I've found that I greatly prefer working in person alongside my colleagues rather than remotely. Being in the office most days allows me to actively contribute to team discussions and learn directly from others. It also creates opportunities to connect with team members I might not have otherwise interacted with, expanding my understanding of the breadth of CAF's work and improving my overall learning about their processes and systems. If able - this would be one of my top recommendations to anyone in the Academy starting with a client.
