Sharing what Ten10 Junior Consultants are working on

As we celebrate International Women's Day, I'm proud to share my journey as a Test Analyst with International Personal Finance (IPF) over the past seven months.

In my role, I am responsible for ensuring that new features and functionalities meet the highest quality standards before advancing to the next phase of testing. I primarily test a range of applications that support IPF branch agents in submitting loan applications and tracking customer payments. We focus on around six applications, each managed by different teams and sprints, which provides me with continuous learning opportunities.

I commute into the Leeds office twice a week from Barnsley. Our workday typically begins with a team standup, where developers and testers discuss current tasks and next steps. This is followed by a wider testing team standup which includes testers from various squads, including those focusing on Performance Testing and UAT. These standups help us stay aligned, allowing us to manage our time effectively and address any urgent issues. As well as standups, we also have closing ceremonies which highlight what went well and what we could do better next time.

A recent achievement in my role has been leading a test automation project utilising Playwright to automate tests for one of our web-based applications. Given the work we did with Selenium in core training, I quickly adapted to Playwright and began developing a plan and generating tests. This International Women's Day, I am delighted to step into a leadership role, embracing new challenges and opportunities. Here's to empowering and celebrating Women in Tech!
