Sharing what Ten10 Junior Consultants are working on

Hello everyone, I'm Alaa and I'm from Academy A33. Since joining Ten10, I've been on quite the self-development journey! Earlier this year, I had the opportunity to work as a QA analyst on a testing project, which gave me some valuable hands-on experience with manual testing. However, most of my time has been dedicated to upskilling during the Grow-IT phase.

I am currently building a quiz web application based on the ITIL 4 framework, and I hope to share it on the Knowledge Base once it's finished – It'll be useful for anyone preparing for the ITIL 4 Foundations exam.

It's been a fun project, and I've purchased a web development course using the learning budget to help with some aspects of the coding. I've also explored other interests through Udemy courses and have achieved two industry-standard certifications: ITIL 4 Foundations and Professional Scrum Master I (PSM I).

My typical day starts with a 9 am stand-up call, which has been a great way to touch base with the trainers and fellow Ti10s. I try to split my day into different tasks, usually varying my activities between morning and afternoon, to avoid things becoming too monotonous. It can be challenging to stay consistently motivated during independent learning, but setting daily goals and reaching out for support has helped tremendously. I've learned it's important to stay adaptable, take regular breaks and be kinder to myself especially when things don't go as planned.

Reflecting on my time in the Grow-It phase, I'm really proud of all the progress I've made both in my learning and professional skills. It's been rewarding to push myself and step outside my comfort zone, saying yes more often, and taking on new opportunities. Working on my confidence, especially through preparing a Lunch and Learn session, has shown me how far I've come.
