

Academy Snapshot

Sharing what Ten10 Junior Consultants are working on

Hi everyone, I'm Lord, and I joined Ten10 as part of the A35 Cohort in 2024. My background is in mechanical engineering, and while I've always been interested in tech, I wasn't sure how to get started especially since I didn't have much coding experience. I used to think you needed to know a lot before even stepping into the industry.

That changed when my friend told me about Ten10 and how they train people from all kinds of Academic backgrounds, not just those with a technical degree, and that really caught my attention.

I decided to apply, and I'm so glad I did. The Academy was a really supportive space where I felt comfortable making mistakes and asking for help. The trainers were approachable and always happy to guide us.

After finishing the training, I joined Ten10 in December 2024 as a Junior consultant working in accessibility testing. I didn't know much about it at first, but my team was great at helping me learn. Now I test digital products like websites, web apps, and more to make sure they're accessible for people with disabilities. If something doesn't meet WCAG guidelines, I log it and explain what went wrong and how it could be fixed.

One of the highlights so far has been leading parts of client presentations and taking ownership of audits. That trust has really helped me grow in confidence. I'm genuinely thankful for all the support from the team at Ten10.
