Sharing what Ten10 Junior Consultants are working on

I'm currently working on a large scale change transformation and back-end systems migration project. In addition to this, I have worked on several software development initiatives, such as contributing to a Selenium-based test automation project. We primarily use Selenium via PowerShell, with flexibility to use other Microsoft-based languages as needed.

Our team operates in a highly agile environment, with daily standups/catchups, regular progress reviews, and continuous stakeholder engagement to refine requirements. This approach ensures we remain adaptable and aligned with client needs.

I've relocated to Milton Keynes for this role and work from the office five days a week. The routine provides structure which has helped me maintain a healthy work/life balance. I have been blessed with the flexibility to travel home every weekend, as I only work during the week, which gives me the best of both worlds.

A major challenge I've faced has been navigating complex stakeholder expectations-balancing the needs of customers, finance, project management, tech teams, and developers. Aligning these diverse requirements into actionable information has been both demanding and rewarding.

One of my proudest achievements so far has been contributing to the development of a project progress reporting tracker. It's now used daily by over 30 people and has saved countless hours of manual work, making a tangible impact on productivity. I find it incredibly motivating to know that the solutions our team has worked so hard to develop will continue to deliver value and support the long-term goals of the wider organisation.
