Sharing what Ten10 Junior Consultants are working on

I am a Customer Solutions Analyst working on a project focused on completing a customer API migration. The day-to-day requirements of my role focuses on business to business customer communication - this can be daily communication over emails or Microsoft Teams calls. Aside from communication, I am also involved in API testing, frequently using tools such as Ready API, Notepad++ and conducting test cases for validation purposes.

Monday to Friday I work in the office from 9am - 5:30pm, which has enabled me to build a good rapport with all my colleagues and I am lucky enough to work with other Ten10 team members on the client side.

Izzey Box | Academy 37

My daily responsibilities are to respond to email communications and make contact with customers to ensure a smooth migration between the new API and the legacy version. Due to this, the biggest challenges can sometimes be the simplest. If the customer contact is incorrect or it's a bounceback email, it can require additional time that was unexpected. Therefore, the enjoyable and biggest learning experiences such as API testing and creating test cases has been an interesting opportunity to broaden my technical knowledge further.

As it's an agile environment, I have two stand-ups across the day. These all focus on different projects and provide an opportunity to outline any progress updates, issues and blockers that I may have encountered. I have daily communication with large clients, which at first was daunting and coming from a non-technical background, I was concerned that this would limit my adaptability to fully understand the technical knowledge required. However, this has been made easier by having a supportive environment of Ten10 colleagues around me; I've taken full advantage of their prior experience and asked questions, with an aim to make sure I continue to enjoy the learning process and gain lifelong knowledge.
