Sharing what Ten10 Junior Consultants are working on

I'm a Junior Portfolio Analyst at SSE Thermal. My role involves hosting and facilitating regular RAID sessions to review and refine existing risks, issues, and dependencies within the Value Streams I support. In addition, I attend stand-ups, sprint reviews, and sprint planning meetings to ensure requirements are clearly defined, blockers are addressed promptly, and projects remain aligned with SSE's overall vision.

Natalia Burgess | Academy 35

I am part of the Digital Technology Support Office (DTSO), which operates in an Agile environment. We work closely with stakeholders, providing guidance and support while holding them accountable for routine tasks such as completing bi-weekly sprint reports, submitting monthly updates, and ensuring accurate information is provided for purchase orders. I use tools such as Azure DevOps, Microsoft applications (Excel, PowerPoint, Power BI, Outlook), and iBuy (SSE's purchase requisition system) to deliver on these responsibilities.

A key challenge in my role is managing stakeholder expectations, particularly regarding iBuy. There have been several instances where system limitations have blocked necessary changes to purchase orders, such as price adjustments, revised need-by dates, or incorrect invoice entries; this can impact project deadlines. Despite these challenges, they have strengthened my ability to maintain strong relationships with colleagues and procurement by keeping them informed of blockers and updates while working collaboratively to find solutions.

As my role is remote, settling in initially was difficult without the opportunity to meet colleagues regularly in person. However, through consistent weekly calls and catch-ups, I have built positive relationships and now feel a strong sense of belonging at SSE.
