Sharing what Ten10 Junior Consultants are working on

Hello everyone, I am Ikechi from Academy 39! I am currently working with the NCC group as an Associate Security Consultant as part of the Consultancy and Implementation team where I'm supporting client delivery and internal business development.

I support the delivery of security and compliance projects across a range of clients. My work so far has been around the frameworks such as ISO 27001, NIST CSF, and Cyber Essentials, following a risk-based methodology to help organisations assess, improve, and maintain their security posture.

I've contributed to ISO audits, Cyber Essentials certifications, and broader standard review and alignment projects, gaining hands-on experience in both governance and technical security practices.

My typical day can include attending client meetings, assessing client security standards, developing my technical skills and assisting in creating documentation for clients. A challenge that I have faced is getting used to balancing client work with internal development. These past 6 months that I have been exposed to the security space and a technical learning curve which has been exciting to tackle as I am often supported in that whether its reaching out to senior consultants or being provided the resources to help me deliver client work.

From a technical perspective, I've worked in Microsoft Purview, Azure, making use of virtual machines for internal development and gaining exposure to developing AI agents, which has added an innovative angle to my role. My responsibilities centre around supporting senior consultants, analysing security standards, contributing to reporting, and engaging with stakeholders to ensure practical and effective security outcomes. I have really enjoyed my time here so far and I am looking forward to developing consultancy and technical skills
