Sharing what Ten10 Junior Consultants are working on

Hello everyone, I'm Deborah from Academy 39. I currently work with the NCC Group as an Associate Security Consultant within the Consultancy and Implementation team, where I support client engagements across governance, risk, and compliance.

I have had the opportunity to work across a varied range of security assurance and risk management projects, helping organisations strengthen their security posture and align with industry frameworks and regulatory requirements. My work has included supporting assessments against the NIST framework, contributing to Cyber Assessment Framework (CAF) reviews within the Critical National Infrastructure (CNI) sector.

Deborah Olowookere | Academy 39

More recently, my focus has shifted towards Third-Party Risk Management, where I review supplier assurance evidence and security documentation such as penetration testing reports, to assess whether third parties are meeting expected security standards.

No two days look exactly the same, but most days begin with a morning stand-up to align on priorities, client deliverables, and engagement updates, followed by reviewing emails and attending meetings. Depending on the engagement, I may be analysing security documentation, liaising with suppliers, or drafting assessment reports.

I am really proud of how much I have developed professionally and how my understanding of cybersecurity and risk management has grown since starting, particularly as I came into the industry with no prior experience. Consultancy moves quickly and adapting to unfamiliar frameworks and industries was a challenge early on. However, learning from experienced consultants, taking ownership of my development, and drawing on the Academy support has made a real difference, not just to my confidence, but to the quality of work I am able to deliver.

Looking ahead, I am keen to continue building my consultancy and technical skills to gain exposure across an even wider range of projects.
