Sharing what Ten10 Junior Consultants are working on

Hi everyone! I'm Senada from Academy 40, currently placed at NATS within the UK Airports Engineering Project Management team.

My role is a blend of PMO support and Project Management. I support General Engineering Managers (GEMS) in capturing resource demand while assisting Senior PMs on diverse asset replacement projects, ranging from installing new airfield cameras to upgrading Air Traffic Control voice systems.

Senada Khan | Academy 40

Working within a Waterfall methodology, I produce risk registers, build schedules in Microsoft Projects (PPM), lead meetings with experienced stakeholders, and create monthly reports and pipeline reviews. Because safety is NATS' top priority, my focus is on ensuring every phase is executed with complete accuracy and attention to detail.

Beyond MS Projects, where I developed skills in scheduling and the logic behind it, I daily utilise Analysis for Excel, Salesforce, PowerBI, and Powerpacks for reporting. A key challenge has been learning to adapt my communication style across a vast range of stakeholders, ensuring technical details are clear for everyone involved.

Sitting at the intersection of different teams has provided me with well-rounded support, but my biggest highlight so far was a site visit to Gatwick Airport. From driving across the airfield, to overlooking over the whole airport inside the control tower helped to truly contextualise my work, seeing those asset replacement projects come to life!
